

Approved Landscape Ground Cover Materials for Unit Planting areas:

Ground Cover materials in unit planting areas serve as both decorative and practical functions ensuring favorable growth conditions for plants and preventing weed growth. Depending on the raw material and its structure, there are different types of ground cover materials approved for use in unit planting areas. These are detailed below

Organic MULCH types include commercial processed mulches between 10-50mm in size. They include wood mulches in colors: Brown, Black, Red(rust)

Types of wood mulches used as ground covers include:

Bark Mulch (hardwood or pine)

Cedar Mulch, or

Cypress Mulch

Non Organic MULCH include both synthetic and stone materials. These materials should be between .25 inch and 3 inches in size and must be shades of black, gray, brown or white.

Approved materials include:

Rubber Mulch

Gravel Stone

Crushed rock

White marble

River rock

Pearl rock
